Encina Wastewater Authority

Reliability Improvements

Fact Sheet

May 2019

1. What is the project and why is Encina doing this?

The project is rehabilitating a large but critical pipeline at our plant to continue to provide reliable wastewater service to our member agencies and their customers.

2. What is duration?

The most active part of the project is anticipated to last an estimated 6 weeks, starting in mid-May. At certain key times, construction activity may occur 24 hours a day to expedite the project and so that Encina can continue providing wastewater treatment during construction.

3. What can our neighbors expect?

Our neighbors may notice some temporary construction activity at the site, including construction equipment, lighting, noise, and the possibility of intermittent odors. Work will occur 24x7 so wastewater treatment can continue while we complete this rehabilitation work.

Thank you for your patience while we make these improvements so that we can continue providing reliable wastewater service to north county.

4. For more information, who can I contact?

For more information, you may call (760) 438-3941.
